Reports > Audit > 07.10 Patients Missing DC Date

This report will generate a list of patients who have been discharged on the Referrals > Referral Information tab but does not have a discharged date keyed into the Payers tab.

The report will show the patient's status and how many visits have been completed. You do have the option to filter the report by program(s), or you can leave the field blank to generate the listing for all programs.

Note: If there is no discharge date, the system still considers the patient as 'Active,' and the patient will not show up on the Discharged Patients Report.
