

EVV – Common Scheduling & Care Plan Issues

Barnestorm Office > EVV > Aide Care Plan / EVV Visits / Schedule Updates

Overview

This guide covers the most common issues and misunderstandings when maintaining EVV schedules and care plans, including:

- When to use **Stop and Copy** on the Aide Care Plan.
- When to **edit/recreate schedules** vs. update a single entry.
- What actions cause schedule/app problems and should be avoided.
- When Barnestorm Support may need to help clean up existing schedules.

Important Schedule Requirements

- Each schedule must have a valid **Program** and **Payer**.
- An appropriate aide **Job Code**
 - Typically, the Job Code matches the payer code
 - The Job Code should have aide revenue codes (e.g., 0570, 0571, 0599).
- A chargeable **visit code**
- A valid **Employee/Caregiver** who is set up correctly in Barnestorm for EVV.

If any of these pieces are missing, the aide may not see the visit/tasks on the app or may be unable to clock out.

#1 Issue – When to Use *Stop and Copy* on the Care Plan

Use **Stop and Copy** instead of editing the existing plan when any of the following change:

- The **assigned aide** is changing permanently.
- The patient **switches payers** (Medicaid, MCO, etc.).
- You are **adding or removing tasks** from the plan.
- The **visit times, days, or frequency** has changed mid authorization period.

Do NOT:

- Do **not** change the **Thru Date** on the care plan to end services.
- Changing the Thru Date will **not clear future visits** from the app and can cause schedule errors.

When to Edit and Recreate Schedules

Edit/recreate schedules (rather than Stop and Copy) when data was entered incorrectly from the beginning:

- You find **incorrect or incomplete information** on schedules that needs to be updated.

- The **preferred visit time of day** or **day of week** was entered incorrectly.
 - If time or day of the week is changing, then use the Stop and Copy feature.
- Note that this does not keep a historical record of the aide plan.

When to Update a Single Scheduled Entry

Update a **single schedule entry** (instead of recreating everything) when:

- The assigned aide **calls off** and a **fill-in aide** will complete that visit only.
- You need to change the scheduled time in and out.

For a single visit, do NOT:

- Do **not** remove the existing scheduled entry and manually add a brand-new one.
- Do **not** copy a past schedule and paste it into a future date.
- Do **not** use the **Recurrence** feature on the Schedule Calendar for EVV changes.

Issues Prevented When Steps Are Followed

Correct use of Stop and Copy, schedule edits, and single-entry updates will help prevent:

- **Incorrect app schedules** – missing or duplicate visits on the aide's app, even when Barnestorm Office looks correct.
- Aides **unable to clock out** or **unable to view tasks** for a visit.
- EVV visits that do **not print on the weekly visit note**.

Extra Tips for Adding/Editing Scheduled Visits

Do NOT use these screens for EVV schedules:

- Do not copy previously used schedules and paste them into future dates.
- Do not use **Schedule Entry**, **Medicaid Weekly**, or **Medicaid Monthly** screens to add EVV schedules.

Recommended:

- Use the **EVV Visits** or Schedule screen to add extra schedules.
- Always be sure to select the correct **Aide Care Plan** when adding a new schedule.

When to Contact Barnestorm Support

If incorrect steps have already been taken on an existing care plan (for example, manual schedule edits in multiple

places or incorrect Thru dates), Barnestorm Support may need to:

- Clean up incorrect schedules in the background.
 - Remove problem visits and rebuild them using the correct EVV workflow.
 - Help ensure the app and Barnestorm Office are back in sync.
-

Tip: When in doubt, stop and copy the care plan for permanent changes, and use the EVV Visit screen for one-time schedule fixes.
